This is the first assignment introducing you to HTML (hypertext markup language) the language used for writing web sites. For this assignment, you need to create a folder called **WWWLab1_lastname**. Inside the folder create a folder called **images. REMEMBER: all web file and folder names need to be in lower case and use the underscore to separate words, this is the web standard!**

Download images that represent the following:

1.   What is your favorite music or band?
2.   What is your favorite restaurant or food?
3.   What is your favorite book?
4.   What is your favorite movie?
5.   What is your favorite thing to do when not at school?

Give all of the file names descriptive names with no spaces and all lower case letters. Remember camel casing when saving files. Save all files in your favorites folder in the images folder.

Now open Notepad++ and type in the following (this is the basic structure for all HTML pages):

```
 1   <!DOCTYPE html>
 2   <html lang="en">
 3   <head>
 4       <title> Your Name Blank Template </title>
 5       <meta charset="utf-8">
 6   </head>
 7
 8   <body>
 9       This is my first web page
10       <hr>
11   </body>
12
13   </html>
14
```

1.   Now insert a list of your favorite things using a list tag:
2.   Insert the images using the image tag: <img src="….." alt="text" height="200" width="200">
3.   Only use inline styles for any design features at this point
4.   Upload your WWWLab1_lastname folder and upload it to your Google site

Use the resource w3schools.org for any additional coding
